## frame sanitizer

**Efficacy vs viruses and bacteria certified by accredited lab tests**

**Annihilates Covid-19 in just 30 seconds**

**Make your glass, your tools and your small objects SAFE!**

## Machine for sanitizing trial frames by a germicide UV-C bulb

- Ideal for the optician that wishes to sanitize trial glasses, without using water or other fluids, with neither cleanser nor heat
- Through the utilization of a UV-C bulb with high germicide power it destroys the bacteria, viruses, germs, spores, molds and other micro-organisms or pathogens from the surface of the glasses in a few seconds, by modifying their DNA
- Germicide power is maximized due to internal reflecting hammered and mirrored aluminium surfaces and to the way the glasses are hung: they are open and this allows a direct and close exposition of the glasses critical areas, the ones closer to people's eyes, such as the nosepad, the bridge, the hinges to UV-C rays
- You can sanitize up to about 7 frames simultaneously, depending on their size
- An electronic timer allows you to choose the sanitization time between 10 seconds and 1 minute maximum, then automatically turning off the bulb: in this way you prevent the damage that the frames could suffer if the machine is left switched on
- Safety of the user guaranteed from a cut-out switch that automatically turns off the light in case of sudden opening of the lid
- The lid is made of UV-proof plexiglass ®
- An electronic ballast keeps the performance of the bulb always at the same level, germicidal one, and automatically turns off the bulb at the end of its germicidal life. Without this component the bulb might be turned on, emitting a light, although its wavelength might not be germicidal anymore (253.70 nm)
- Its very nice design and the compact size allow the hygiene box to be placed on the optician's benches and to give the shop a good image of attention to hygiene as well as a sense of elegance and design.

### Accessory Basket

code C3402  
(Optional)

A practical painted basket, which easily fits into the equipment, offers the possibility of sanitizing optical smaller parts, such as lenses and tools, and small objects of daily use such as keys, masks, pens, mobile phones etc.

Hygiene box	code A3400	Maximum length	340 mm
Feed voltage	230V-240V - 120V	Maximum width	210 mm
Maximum power	12 W - 10 W	Maximum height	206 mm
Bulb average lifetime	≈ 8000h (depending from the brand)	Machine weight	4.2 kg
